

Operations Review Q3 2026

Meeting date 18 September 2026

The quarter met the API availability and latency objectives, but the change failure rate remained above target. The next review will focus on failover readiness, certificate rotation, and refund-worker capacity.

Service results

Measure	Q3 result	Objective or comparison
API availability	99.95%	Availability objective met
API p95 latency	420 ms	500 ms objective
Production incidents	7	2 P1 and 5 P2
Mean time to recovery	31 minutes	48 minutes previously
Change failure rate	8.4%	7% target

Top operational risks

- The database failover exercise has not been repeated since May.
- Four production certificates expire during October.
- The refund worker reaches 82 percent CPU during the Monday peak.

Decisions and owners

Owner	Action	Due date
Maya Chen	Run a database failover game day	2 Oct 2026
Idris Rahman	Rotate the October production certificates	28 Sep 2026
Elena Petrova	Test refund-worker peak capacity	6 Oct 2026

Success measures for the next review

- Complete the failover game day with recovery under twenty minutes.
- Rotate every October certificate at least fourteen days before expiry.
- Keep refund-worker CPU below seventy percent during peak load.
- Reduce the change failure rate below seven percent.
